

Java Utility Classes

Class / Feature	Purpose	Example Program	Output
Arrays	Perform operations on arrays	<code>int[] a={30,10,20}; Arrays.sort(a); System.out.println(Arrays.toString(a));</code>	[10, 20, 30]
Collections	Perform operations on collections	<code>ArrayList<Integer> a=new ArrayList<>(Arrays.asList(30,10,20)); Collections.sort(a); System.out.println(a);</code>	[10, 20, 30]
ArrayList	Store a dynamic list of elements	<code>ArrayList<String> a=new ArrayList<>(); a.add("Java"); a.add("C"); System.out.println(a);</code>	[Java, C]
LinkedList	Store elements using a linked list	<code>LinkedList<String> a=new LinkedList<>(); a.add("A"); a.addFirst("Start"); System.out.println(a);</code>	[Start, A]
HashSet	Store unique values	<code>HashSet<Integer> s=new HashSet<>(); s.add(10); s.add(20); s.add(10); System.out.println(s);</code>	[20, 10]*
TreeSet	Store unique values in sorted order	<code>TreeSet<Integer> s=new TreeSet<>(); s.add(30); s.add(10); s.add(20); System.out.println(s);</code>	[10, 20, 30]
HashMap	Store key-value pairs	<code>HashMap<Integer,String> m=new HashMap<>(); m.put(101,"Ashok"); m.put(102,"Ravi"); System.out.println(m.get(101));</code>	Ashok
TreeMap	Store key-value pairs sorted by key	<code>TreeMap<Integer,String> m=new TreeMap<>(); m.put(103,"Kumar"); m.put(101,"Ashok"); System.out.println(m);</code>	{101=Ashok, 103=Kumar }
Iterator	Traverse collection elements	<code>ArrayList<String> a=new ArrayList<>(Arrays.asList("A","B")); Iterator<String> i=a.iterator(); while(i.hasNext()) System.out.println(i.next());</code>	A B
Scanner	Read input from keyboard	<code>Scanner sc=new Scanner(System.in); String name=sc.nextLine(); System.out.println("Hello "+name);</code>	Hello Ashok
Random	Generate random values	<code>Random r=new Random(); System.out.println(r.nextInt(10));</code>	7
StringTokenizer	Split a string into tokens	<code>StringTokenizer st=new StringTokenizer("Java is easy"); while(st.hasMoreTokens()) System.out.println(st.nextToken());</code>	Java is easy

Date	Represent date and time	Date d=new Date(); System.out.println(d);	Current date and time
Calendar	Access date/time components	Calendar c=Calendar.getInstance(); System.out.println(c.get(Calendar.YEAR));	2026
