

java.io

Class / Feature	Purpose	Example Program	Output
File	Create and manage files/folders	File f=new File("test.txt"); System.out.println(f.exists());	true / false
FileReader	Read characters from a file	FileReader r=new FileReader("test.txt"); int c; while((c=r.read())!=-1) System.out.print((char)c); r.close();	Contents of file
FileWriter	Write characters to a file	FileWriter w=new FileWriter("test.txt"); w.write("Hello Java"); w.close();	Hello Java stored in file
BufferedReader	Read text efficiently, line by line	BufferedReader br=new BufferedReader(new FileReader("test.txt")); System.out.println(br.readLine());	Hello Java
BufferedWriter	Write text efficiently	BufferedWriter bw=new BufferedWriter(new FileWriter("test.txt")); bw.write("Hello"); bw.newLine(); bw.write("Java"); bw.close();	Hello Java
PrintWriter	Print formatted text to a file	PrintWriter p=new PrintWriter("test.txt"); p.println("Java"); p.println(100); p.close();	Java 100 stored in file
FileInputStream	Read bytes from a file	FileInputStream in=new FileInputStream("test.txt") ; int b; while((b=in.read())!=-1) System.out.print((char)b); in.close();	File contents
FileOutputStream	Write bytes to a file	FileOutputStream out=new FileOutputStream("test.txt")); out.write(65); out.close();	A stored in file
InputStreamReader	Convert byte stream into character stream	InputStreamReader r=new InputStreamReader(System.in); int c=r.read(); System.out.println((char)c);	Input: A Output: A

OutputStream Writer	Convert characte r data to byte stream	OutputStreamWriter w=new OutputStreamWriter(Syst em.out); w.write("Hello Java"); w.flush();	Hello Java
DataInputStrea m	Read primitive data types	DataInputStream in=new DataInputStream(new FileInputStream("data.dat ")); System.out.println(in.read Int());	100
DataOutputStre am	Write primitive data types	DataOutputStream out=new DataOutputStream(new FileOutputStream("data.d at")); out.writeInt(100); out.close();	100 stored in file
ObjectOutputSt ream	Write objects to a file	writeObject()	String name = "Ashok"; out.writeObject("Ashok");
ObjectInputStre am	Read objects from a file	readObject()	System.out.println(in.readO bject());
Console	Read input securely from console	Console c=System.console(); String name=c.readLine("Name: "); System.out.println(name);	Name: Ashok Ashok
